## New Product Release!

**Order by Nov 20th**

**Balanced both strength and response !**

**Updated HD Idler Gear now available !!**

Previous HD idler gears have high strength and excellent wear resistance, but their weight makes sometimes have dissatisfaction with the throttle response. This new gears reduce the weight from 11.5g to 9.2g with drilled hole on side surface and reduce gear width design to the minimum for necessary. It is improved throttle response and drift controllability and traction performance. And the quenching process has been improved gear durability. Fit for GALM chassis with OD2589 necessary.

●OD2742 Drilled HD Idler Gear (For GALM / XEX Series) 1,800 JPY

**Will be shipped in late December. 2020**

## Introducing a new O-ring which is withstand the strong tire grip !

An O-ring used to mount the tire to the wheel. The thickness and hardness are set to perfectly balance of mounting. Since the tires and wheels are not tensioned more than necessary, the tire rotation balance makes perfect. Come with 8 pcs with black color.

●OD2796 Tire Stabilized O-Ring  
(Black/8pcs) 800 JPY

**Will be shipped in late November. 2020**
